

Henry Suh

Software Engineer

Profile

I am currently a student in Software Engineering who is highly interested in creative, efficient, and innovative ways of programming. I will provide responsible and reusable solutions with high quality in a collaborative programming environment.

Language & Apps

C, C++, C#, Java, JavaScript, HTML, CSS, Node.js, Python, SQL

I am more focusing on Web Programming and AI Programming with MEAN stack or MERN stack and Python, but I am also available at General Programming with C series, Java, and other languages.

MS Visual Studio, VS code, PyCharm, Spyder, MATLAB, Eclipse

These are my favorite tools I am familiar with. I've worked with MS Visual Studio more than 2 years, with Vs code and PyCharm more than 1year, and with MATLAB and Eclipse more than 3 years. I choose one of those tools based on what language I use to develop.

Education and Experience

Bachelor's Degree of Media Engineering in South Korea

Worked as a part time web programmer

1year in Computer Science in Humber College

(current) Student software engineer in Centennial college

Interests

I basically have interests of all fields of programming including General, Web, AI, and even Cyber Security. Since I am a student, I do not want to drop one field at this early point, so I have been studying all the fields as much as I can. However, if I have to choose for the future focus, I would like AI and Web because those are the widest field with full of curiosity and creativity, and I really enjoy exploring and seeking for answers.
